Open-source software moves into public sector

April 26, 2009

Like Delhi, the University at Albany has broadly used open-source software. Derek Werthmuller, the director of UAlbany's Center for Technology in Government, said his campus has found a good balance between open-source software and commercially licensed programs. "Awareness is important," he said. "The academic community needs to be fully aware of open-source and looking at it as an option when they're doing software selection."

Enterprise Information Technology Requires Customized Governance

April 9, 2009

While shared experiences provide valuable lessons and insights, research is showing a one-size-fits-all approach isn't the way to go. "[States] are finding that simply adopting the structure in place in another state is problematic," said Donna Canestraro, program manager of the CTG and project manager of the New York study. "Conditions that make IT governance functional in one state are often not replicable. Differences, such as the size of government, institutional structures and political priorities, impact what form of enterprise IT governance is feasible. In other words, while states can benefit from a focus on broad ideas and models when starting to think about their state IT governance, it is the process of customization, the attention to context that determines success."

5 secrets of leading-edge technology adopters

April 3, 2009

Some enterprises make the mistake of grasping for a technology solution before they analyze the problem they need to solve. Anthony Cresswell, interim director of the Center for Technology in Government, said that's a fairly common error. "People are faced with a problem and jump to technology as a solution before they have an understanding of the nature of the problem and what it might take to solve it," he said.
